01

SOURCING

You spend more time hunting for the right photo than writing the slide itself. That search kills momentum.

02

PLACING

Dragging images into slides breaks layouts every time. Text shifts, frames vanish, and you start over again.

03

FITTING

Cropping, resizing, and nudging pixels until the image looks right inside the template. Nobody trained for this.

PART ONE

ON-BRAND DEFAULT

Every generated deck arrives with images already matched to your template palette and mood.

No stock-photo hunting required. The AI reads your theme and selects visuals that belong.

Colors, contrast, and composition stay consistent from the first slide to the last.

“TURN ROUGH NOTES INTO BOLD
FULL-BLEED IMAGE SLIDES IN ANY
STYLE. DESCRIBE THE VIBE AND
OCUPORT DESIGNS THE VISUAL
AROUND YOUR WORDS.”

AI IMAGE SLIDES

DESCRIBE IT

Type a prompt and get that exact image

Inline

Instant

Generated inside the slide

No external tool required

SWAP INSTANTLY

Double-click any image on any slide. Pick your own photo. It drops into the same frame with zero re-layout and zero re-cropping.

The template holds position, size, and crop. Your new image inherits the frame. The layout never breaks, even when you swap ten images in a row.

YOUR LIBRARY

Search a professional stock library without leaving the editor, or upload your own images and PDFs once and reuse them across every presentation you build. One library, every deck.

STOCK

Search and place in one click

UPLOAD

Your images and PDFs stored

REUSE

Assets shared across all decks

Three controls give you frame-perfect image placement without leaving the slide editor or opening an external tool.

DRAG

Reposition the image inside its frame by dragging. The subject lands exactly where your eye wants it.

RESIZE

Pull the corner handles to scale up or down. Aspect ratio stays locked so nothing stretches or distorts.

CROP

Trim to the frame boundary so only the essential part of the photograph remains visible on the slide.

ALWAYS BRANDED

Images inherit your template frames automatically: rounded wells, full-bleed covers, and cover-fit crops. Every photo looks designed-in, never pasted on. The template does the work.
